

## PLANTING ONE-HALF ACRE PLOTS

Everything you need to plant a ½ acre annual wildlife plot for less than you ever thought.

This scenario only costs \$151.75 plus tax.

√ SEED: Pennington Buckmaster Feeding Frenzy 1 – 25lb bag does ½ acre \$37.50

√ LIME: Green n Gro 30 Lb fast acting lime 4 – 30Lb bags \$13.25ea = \$53.00

√ FERTILIZER: 5-10-10 fertilizer 50 Lb bag 5 – 50 Lb bags \$12.25ea = \$61.25

What do you get? You will have a ½ acre plot that provides food throughout the fall, winter and spring. Deer will love it. Turkey will love it. Dove and quail will love it. Your plot will provide nesting habitat in the spring as well.

What should I do in the spring? Consider topdressing with 25 lbs of Urea (46-0-0) in late February unless you have added Durana to the mix. If you have added Durana you can skip the spring fertilizer.

**Add a single lb of Durana White Clover and you will be adding a high quality perennial to your mix for about \$8.50 more. (5lb bag retails for \$42.50)**

While not all clovers are long lasting perennials like Durana, all clovers will add nitrogen to your plot to feed the grasses and other plants around it. Consider adding clovers to increase the protein content of any wildlife plot mix.

## Want something the deer will really go to this fall and winter? Try a Brassica mixture.

This scenario only costs \$126.20 plus tax

√ SEED: Wildlife Perfect Brassica Mixture 3 Lb bag \$11.95

√ LIME: Green n Gro 30 Lb fast acting lime 4 – 30Lb bags \$13.25ea = \$53.00

√ FERTILIZER: 5-10-10 fertilizer 50 Lb bag 5 – 50 Lb bags \$12.25ea = \$61.25

What do you get? Great ½ acre plot for late fall and early winter activity with high protein. This mix builds stamina during the rut. Deer, turkey and small game will love it.

## Want to add protein and energy to an existing plot in the fall and winter? Try a Brassica mixture.

This scenario only costs \$11.95

√ SEED: Wildlife Perfect Brassica Mixture 2.5 Lb bag \$11.95

Just broadcast this over your existing plot. If your existing plot is thriving no need for fertilizer or lime. If it needs a boost use the recommendations in the previous scenario above.

What do you get? A boost of food energy and protein to your existing permanent ½ acre plot for the fall and early winter. Deer, turkey and small game will love it.

## What makes a good perennial plot?

Mixes containing superior varieties of white clover and chicory are considered permanent perennial plots and will last several years. Wildlife Perfect and Pennington products are selected for their palatability and superior agronomic characteristics. If the deer don't like the taste why plant it!

## How can I control unwanted weeds in my existing plot without harming the clover?

Try using a weed wiper containing roundup.
